

ABSTRACT OF THE DISCLOSURE

An apparatus and method of addressing data losses when ~~When the power supply of to a digital recorder is unexpectedly interrupted during recording, such as when a power failure occurs or the power cord is accidentally unplugged, and~~ the file management information needed to play back digital content is not completely written to a disc. ~~When power is then turned on again, the~~ The recovery process for correcting inconsistencies between the AV data and management information left on the disc is time-consuming. By recording the recovery data used for the data recovery process when power is turned on again ~~after a power failure to disc during data recording,~~ the management information can be recompiled based on the recovery data. Thus, ~~data when power is turned on again, and~~ inconsistencies between the AV data and management information can be corrected. ~~The~~ Additionally, AV data and recovery data in this case can be ~~are~~ written alternately to contiguous areas on disc.
